Specifications

The Fabristeel Marinator is designed to produce consistent marination each time. Regardless of it is frying, grilling or roasting, the Marinator will season the food as it is desired.

With the Marinator, there is no longer unsightly look or touch. Seasonings will penetrate evenly to each piece, giving the same results every single time.

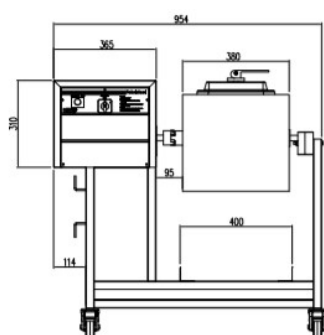

Its specially designed to house a drum large enough to hold and marinate 80lbs each time. This results in the reduction of operators fatigue and the increase in productivity meeting today's demand.
